*„CO2 impact assessment methodologies for applicants and funding programme owners“*

## Peer Review about CO2 impact assessment methodologies for applicants and funding programme owners

- Peers from Austria, Malta, Spain, Sweden and the UK
- Policy challenge addressed: Effective policies on climate protection must assess the greenhouse gas emissions saved by material efficiency measures.
- What could be the basis for deciding between grant applications from different applicants with different technologies?
- What system could, under the premise of low complexity and high reliability, assess CO2 impact of the grant applications?
